nihgov NIH News: Enhancing the brain's lymphatic system when administering immunotherapies may lead to better clinical outcomes for Alzheimer's disease patients, according to a new study in mice. Results published in the journal Nature suggest that certain immunotherapy treatments might be more effective when the brain's lymphatic system can better drain the amyloid-beta protein that accumulates in the brains of those living with Alzheimer's. Major funding for the research was provided by the National Institute on Aging (NIA), part of the NIH, and all study data is now freely available to the broader scientific community. Check our stories to read the NIH news release.
IMAGE: Study shows the meningeal lymphatic vessels in green, blood vessels in blue and amyloid beta in red.

Here in Colombia we want the world to know that the government itself is killing us, we need our voice to be heard and for the international organizations in charge of safeguarding human rights to be present.
Please share.

Aquí en Colombia queremos que el mundo sepa que el propio gobierno nos está matando, necesitamos que se escuche nuestra voz y que estén presentes los organismos internacionales encargados de velar por los derechos humanos.
Por favor comparta.

nihgov Join @enhancescience and the #NIH Diversity Program Consortium in celebrating you: members of the scientific research training community. Here's how you can be part of the #FaceOfScience campaign:
Step 1: Make a #FaceOfScience sign.
Step 2: Take a selfie with your #FaceOfScience sign (or screenshot yourself during a zoom meeting!)
Step 3: Answer one of these questions:
What do you love most about being a scientist?
How is your research personal to you?
How do you enhance science?
Step 4: Post your #FaceOfScience selfie with your response.
